

Afya Chap Chap: Dignity in Every Heartbeat

Maternal Healthcare Redefined. The Vital Editorial Philosophy in Action.

CLINICAL INTELLIGENCE ECOSYSTEM

The Rural Reality: Blind Spots in the First Mile

Distance is only half the battle. The true crisis is the **Information Gap**. Traditional systems are loud, cluttered, and reactive. In rural Kenya, a high-risk pregnancy is often only identified when it becomes an emergency.

Disconnected Records

Patient data scattered across paper registers with no centralized view.

Lagging Response

Escalation happens after crisis – not before it.

Zero Predictive Insight

No system to flag risk before it becomes emergency.

From Data to Intelligence

Introducing the **Clinical Intelligence Ecosystem** – not a tracker, but a command center for maternal outcomes. Total visibility across every active case, in real time.

247

Active Patients

Tracked across all regional clinics

18

High-Risk Cases

Monitored and flagged in real time

94%

SMS Engagement

Patient communication rate

- ① The system surfaces what matters – active risk, predicted attendance, and required interventions – without cluttered menus or alert fatigue.

Design as a Clinical Intervention

Calm in Chaos

High-stress clinical environments demand UI that reduces cognitive load – not amplifies it. Every screen is designed to focus, not overwhelm.

Editorial Dignity

Patient data is treated with the reverence of a high-end publication – clean, prioritized, and legible at every glance.

Breathing Room

White space is not empty. It is a clinical tool for accuracy, focus, and decision confidence under pressure.

Precision Advocacy: The AI Briefing Engine

Predictive Insight

"Kisumu North – 2 critical cases need escalation. 78% attendance predicted." The system anticipates before the shift begins.

Proactive Preparation

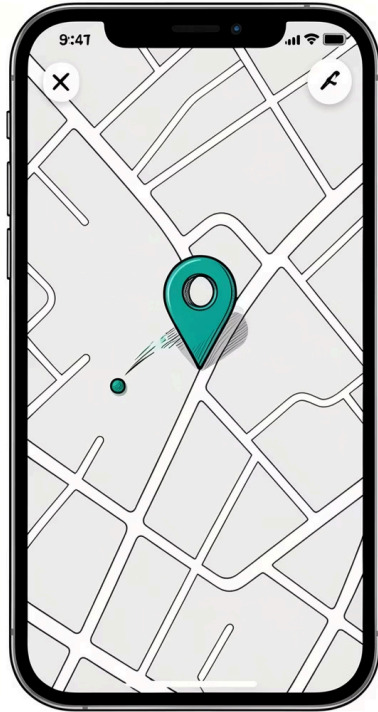

The system instructs the midwife on what to pack – *"Prepare BP kit"* – before she leaves the clinic. No guesswork.

Contextual Intelligence

AI briefings are tailored per region, per caseload, per shift – transforming raw data into actionable clinical guidance.

Real-Time Dispatch: The Uber-Model for Midwifery

Closing the Gap

Immediate midwife-to-mother routing eliminates the fatal delay between identification and intervention.

Transparency

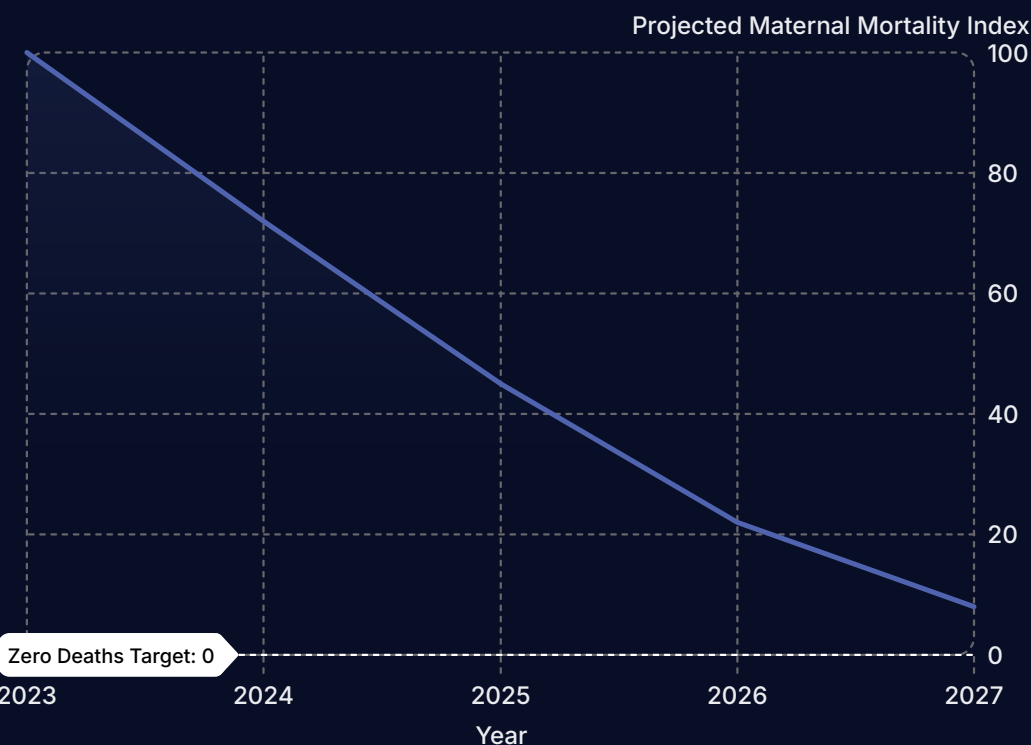

Real-time tracking of **Nurse Wanjiku** with an 8-minute ETA – visible to clinic coordinators and patients alike.

Accountability

Dispatch status – *"On the Way"* – logged, timestamped, and auditable. Every response is a record.

Scalable Dignity

Goal: Zero preventable maternal deaths in rural corridors. **Strategy:** Integration with Ministry of Health digital infrastructure to turn every clinic into a Clinical Intelligence hub.

From 18 Cases to a Nationwide Safety Net

Today, 18 high-risk cases are tracked in real time. With MoH integration, every county clinic becomes a node in a national maternal safety infrastructure.

Dignity in Every Heartbeat.

Invest in the infrastructure of dignity. Deploy the Vital Editorial system across regional health blocs. Redefine what's possible for the next generation of Kenyan mothers.

Schedule a Demo

See the Clinical Intelligence engine in live operation.

Regional Deployment

Partner to deploy across your health bloc.

Impact Investment

Fund the infrastructure, not just the app.

- ❑ **Ready to enter the system?** Contact us to schedule a full systems demonstration and see Afya Chap Chap in live clinical operation.
